

## Queries de MongoDB

### Grupo EMA (G2i)

*Alex*

- **Add many Users to the database:**

```
db.profiles.insertMany([
  {type: "User", email: "sandy@sandia2517352.com", username: " saiez ", password: "Qwerty1234",
    name: " Sandia", lastname: "Sandiez", telephone: "666887755", gender: "FEMALE", card:
    "4434166572341889"},
  {type: "User", email: "say@sandia-sample.es", username: "sdy", password: "Qwerty1234", name:
    "Sandy", lastname: "Ez", telephone: "666887755", gender: "OTHER", card: "4305337765414321"}}])
```

- Pipeline to find Users with emails from sandia domain variations:

```
db.profiles.aggregate([
  {$match: {type: "User", $or: [{email: {$regex: "sandia.com"}}, {email: /@sandia/}]},
  {$group: { _id: "$type", Total_Sandia_Users: {$sum: 1}, SANDIA_emails:
  {$push: {username: "$username", email: "$email"}}}}])
```

- **Update all Admins emails to the format using their name, surname and the domain:**

```
db.profiles.updateMany({type: "Admin"},
[{$set: {email:
{$concat: ["$name", "$lastname", "@sandia-admin.com"]}}}]
```

## Ekaitz

- **Update many current-accounts by type:**

```
db.profiles.updateMany({type: "Admin"}, {$set: {currentAccount: "0000000000000000"}})
```

- Create "admin" user in the users\_manager db:

```
db.createUser({ user: "admin", pwd: "abcd*1234", roles: [{ role: "dbOwner", db: "users_manager"
}]})
```

- Pipeline to group by gender, rename id field, sort alphabetically, skip first result (null group), and limit 2:

```
db.profiles.aggregate([{$group: { _id: "$gender", users: {$push: "$$ROOT"}, total: {$sum: 1}}},
{$project: { _id: 0, gender: "$ _id", total: 1, users: 1}}, {$sort: {gender: 1}}, {$skip: 1}, {$limit: 2}])
```

*Mikel*

- **Update one telephone by name:**

```
db.profiles.updateOne({name: "User 1"},{$set: {telephone: "123459876"}})
```

- **Delete many by gender:**

```
db.profiles.deleteMany({gender: "OTHER"})
```

- Pipeline to filter by type and gender, and group it by type:

```
db.profiles.aggregate([{$match: { type:"User", gender:"MALE"}},{ $group: { _id: "$type", usernames:
{$push: "$username" },TotalUsers: { $sum: 1 } } }])
```
